

Debugging Help Needed: Wallet Sync Issues

Hey fellow crypto enthusiasts! I'm having some trouble syncing my wallet across devices. I've tried restarting my nodes and re-scanning for peers, but I'm still getting errors. Has anyone else experienced this issue?

I'm using a Ledger wallet on a MetaMask extension on Chrome. My node is running on a local network (192.168.1.x). The error message I'm getting is: 'Failed to connect to peer: Connection timed out'.

Can anyone help me troubleshoot this issue?

Transaction ID: 0x... (I'll make sure to redact any sensitive info)

Wallet Brand: Ledger **Wallet Version:** 2.0.0 **Node Software:** Geth 1.10.23 **Node Network:** Local (192.168.1.x)

Thanks in advance for your help!

Moderator · question 1 **M**

Are you trying to sync your wallet across devices for transaction history consistency or to access funds from multiple devices?

I'm trying to sync my wallet across devices for transaction history consistency. I want to make sure that my transaction history is up-to-date and accurate across all my devices, so I can keep track of my transactions and balances easily.

To clarify, I'm not trying to access my funds from multiple devices. I just want to make sure that my wallet is properly synced so I can see a complete and accurate picture of my transaction history.

Does that make sense?

Moderator · question 2 **M**

Are you experiencing this sync issue specifically when trying to access transaction history or when attempting to send transactions?

I'm experiencing the sync issue when trying to access my transaction history. When I open my wallet on a new device, it's not showing me the complete transaction history that I'm expecting. It's like it's missing some transactions or not updating properly.

However, I can still send transactions from the new device without any issues. It's just the transaction history that's not syncing correctly.

Does that help narrow down the problem?
