[PROBE PROMPT · opening]

What is the purpose of this function and how do you intend to use it in your project?

The purpose of the `postToMastodon` function is to send a new status to a Mastodon community. It takes in three parameters:

\* `text`: The body of the post. \* `community`: The name of the community where the post will be sent. \* `title`: The title of the post.

The function returns a promise that resolves to an object with the post details in the desired format.

I intend to use this function in a project that requires posting updates to multiple social media platforms, including Mastodon...

Moderator · question 2

[PROBE PROMPT · follow-up]

What specific challenges or limitations are you encountering when integrating the `postToMastodon` function into your social media aggregator project?

As I integrate the `postToMastodon` function into my social media aggregator project, I'm encountering the following challenges and limitations:

1. **API Rate Limiting**: Mastodon has a rate limit on the number of API requests that can be made per minute. If I make too many requests in a short period, I'll hit this limit and need to wait before making more requests. I need to implement a mechanism to handle this rate limiting, such as caching or queuing requests. 2. **Community...**
