

Debugging Help Needed: Wallet Sync Issues

Hey fellow crypto enthusiasts! I'm having some trouble syncing my wallet across devices. I've tried restarting my nodes and re-scanning for peers, but I'm still getting errors. Has anyone else experienced this issue?

I'm using a Ledger wallet on a MetaMask extension on Chrome. My node is running on a local network (192.168.1.x). The error message I'm getting is: 'Failed to connect to peer: Connection timed out'.

Can anyone help me troubleshoot this issue?

Transaction ID: 0x... (I'll make sure to redact any sensitive info)

Wallet Brand: Ledger **Wallet Version:** 2.0.0 **Node Software:** Geth 1.10.23 **Node Network:** Local (192.168.1.x)

Thanks in advance for your help!

[PROBE PROMPT · opening]

Are you trying to sync your wallet across devices for transaction history consistency or to access funds from multiple devices?

I'm trying to sync my wallet across devices for transaction history consistency. I want to make sure that my transaction history is up-to-date across all my devices, so I can easily keep track of my transactions and ensure that I'm not missing any important information.

However, I do have a secondary concern about accessing funds from multiple devices. I'd like to be able to access my funds from any device, but I'm not sure if that's possible with my current setup. Can you help me understand...

[PROBE PROMPT · follow-up]

Are you experiencing the "Failed to connect to peer: Connection timed out" error on both devices or just one of them?

I'm experiencing the "Failed to connect to peer: Connection timed out" error on both my desktop computer and my laptop. However, I noticed that the error occurs more frequently on my laptop, which is connected to my home network via Wi-Fi.

I'm not sure if the Wi-Fi connection is the culprit, but I've tried restarting my router and laptop, and I've also checked my Wi-Fi settings to ensure that my laptop is connected to the correct network. Still, the error persists.
